CONVENOR'S INVITATION

On behalf of the Faculty of Pain Medicine and the organising committee of the 2015 spring meeting, I would like to invite you to beautiful Queenstown for this inspiring three-day event.

This year, the spring meeting "Adventures in Pain" will examine acute and chronic pain management in trauma, sports and remote settings. The meeting will be held at the world-renowned Heritage Queenstown, with its spectacular views of the towering Remarkables mountain range rising from the waters of Lake Wakatipu, from October 2-4.

We welcome keynote international speaker, Dr Beth Winkelstein from Philadelphia, US. The New Zealand and Australian speakers include specialists from a range of medical specialities including neurosurgery, orthopaedics, and sports medicine. We will also hear cutting edge research presented by scientists from a range of disciplines, complimented by presenters with personal experience of working in extreme environments or managing elite athletes.

For further information, please contact the conference organiser Penny McMorrان on +61 3 8517 5302 or pmcmorrان@anzca.edu.au

I look forward to welcoming you to New Zealand.

Dr Duncan Wood,
Convenor

INVITED INTERNATIONAL SPEAKER

Dr Beth Winkelstein

Beth Winkelstein is Professor of Bioengineering and Professor of Neurosurgery, as well as Associate Dean for Undergraduate Education in the School of Engineering and Applied Science, at the University of Pennsylvania.

Dr Winkelstein's research focuses on defining mechanisms of painful spine and joint injuries, mechanical and cellular mechanisms of chronic pain, mechanotransduction of pain signals, and potential diagnostic and therapeutic approaches for these disorders. She has pioneered several rat models of painful tissue injuries, which are the first neck injury models with clinically relevant pain symptoms. Her group implements rigorous engineering analyses in these in vivo systems to define biomechanical loading and relate those metrics to neuronal plasticity and cellular mechanisms that drive pain. In addition, they are also developing new imaging approaches in ligament tissue biomechanics studies to understand sub-failure micro- and macro-scale tissue responses.

Dr Winkelstein's research has been recognised by awards from the Stapp Car Crash Conference, the International Society for the Study of the Lumbar Spine, the Cervical Spine Research Society and ASME¹. She was awarded a Whitaker Young Investigator Award, an NIH Career Award, the National Science Foundation CAREER Award, and the 2006 YC Fung Young Investigator Award for the most promising young Bioengineer.

She serves on the editorial board for *Spine* and is the co-editor of the *Journal of Biomechanical Engineering*. She has published more than 95 peer-reviewed papers, 15 book chapters and one book on orthopaedic biomechanics.
